

Cut labor costs and Decrease customer wait-time — Double tire-storage volume

Without two-level tire-racks

Your tire inventory is limited
Belts, pads, rotors are buried
in a supply room
Customers are impatient with
waiting; some leave

With two-level tire-racks

- ✓ You can now store over 2,000 tires
- ✓ Parts are handy—incorporated with the tires in the racks
- ✓ You've got the tires, customers are pleased with the short time-frame

Technician efficiencies increase dramatically by having the parts a few feet from the car they're working on.

Technicians used to dive through parts rooms spending time looking for parts and socializing with other techs. Because techs are not dialed in and focused on the car they're working on, customer wait-time increases.

Keep your techs close to the cars

**Have parts at arm's reach – not
in a parts room**

Stock sufficient tire inventory

**Dramatically reduce
customer wait-time**

Customers come back more often

**Customers recommend your
tire shop to their friends.**

Your wallet is happier
